CSTM AT A GLANCE

The Cyber Scheme Team Member (CSTM) qualification is a hands-on, government-recognised assessment designed to validate the practical skills of technical cyber security professionals.

It tests a candidate's ability to conduct security testing across infrastructure and applications, while also evaluating their understanding of legal compliance, risk, and communication.

With a structured exam that includes technical exercises, a viva interview, and a written report, CSTM ensures that certified individuals are not only technically capable but also professionally prepared to operate in real-world environments.
